

MAHAMMADALI ZAMANLI

+994-55-397-75-00 | zamanli.mehemmedeli@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Baku, Azerbaijan

EDUCATION

ADA University — Baku, Azerbaijan

Sep. 2022 – May 2027

Bachelor of Science in Computer Science

Transport and Telecommunication Institute — Riga, Latvia

Feb. 2025 – June 2025

B.S. in Computer Science (Exchange)

EXPERIENCE

Xsolla — Remote

July 2026 – Present

Software Engineer Intern (Backend, Go)

- Designed and shipped backend services in **Go** for Xsolla's commerce & payments platform, owning feature delivery end-to-end from API contract to production rollout within a **microservices** architecture.
- Built idempotent REST and **gRPC** endpoints handling payment webhooks, subscription lifecycle, and entitlement checks, integrating **PostgreSQL** and **Redis** to keep transactions low-latency and consistent at scale.
- Improved service reliability by adding structured observability (**Prometheus** metrics, [OpenTelemetry](#) traces, [Grafana](#) dashboards) and authoring unit + integration tests that cut regression incidents.
- Refactored legacy modules into idiomatic **Go** with clean architecture, interfaces, and concurrency primitives (**goroutines**, **channels**), reducing p99 latency across hot-path services.

AzInTelecom — Baku, Azerbaijan

June 2025 – July 2026

DevOps Engineer Intern

- Architected and deployed a comprehensive telemetry pipeline utilizing the [OpenTelemetry \(OTel\) Collector](#) to ingest, process, and route enterprise infrastructure metrics, logs, and traces into [VictoriaMetrics](#), [VictoriaLogs](#), and [VictoriaTraces](#).
- Engineered custom [Grafana](#) dashboards linked to the VictoriaMetrics stack, exposing real-time multi-cluster health dynamics, reducing performance incident discovery time, and replacing fragmented legacy monitoring.
- Utilized [eBPF](#) tracing mechanics within production [Kubernetes](#) workloads to gain low-overhead, kernel-level network and security observability, safely monitoring system calls and isolating network latency anomalies.
- Managed declarative cluster application lifecycles via [ArgoCD](#) and optimized multi-node bare-metal **Kubernetes** resources under [Rancher](#) orchestration, ensuring complete state synchronization and dynamic traffic management with [Istio](#) service mesh.

AzSimX Azersilah — Baku, Azerbaijan

July 2025 – Dec. 2025

Simulation Software Engineer Intern

- Engineered high-performance **C#** logic in distributed systems, reducing latency 35% and eliminating memory leaks.
- Collaborated with cross-functional teams to deliver distributed system components under **Agile** development cycles, improving sprint delivery consistency.

PROJECTS

Drift Detector | [Go](#), [PostgreSQL](#), [Docker](#), [Kubernetes](#)

- Built Go SaaS polling **pg_stat_statements**, fingerprinting queries, and shipping compressed payloads to backend API.
- Implemented z-score drift detection with Welford's algorithm, flagging regressions ($z \geq 3$ and $>50\text{ms}$ change).
- Designed PostgreSQL anomaly lifecycle with [Testcontainers](#); zero duplicate insertions.
- Deployed on a 2-node kubernetes cluster (Ubuntu 22.04, containerd, Flannel CNI); validated scheduling, rolling updates, and pod recovery.

TECHNICAL SKILLS

Languages: [Go](#), C, SQL ([PostgreSQL](#)), Bash

DevOps & Infra: [Docker](#), [Kubernetes](#), (kubeadm, Flannel CNI), [ArgoCD](#), [Istio](#), [Rancher](#), [Helm](#), GitLab CI/CD, Ansible, [Terraform](#)

Observability: [eBPF](#), [OpenTelemetry \(OTel\) Collector](#), [VictoriaMetrics](#), [VictoriaLogs](#), [VictoriaTraces](#), [Grafana](#)

Back-end & Tools: Microservices, [RabbitMQ](#), [Redis](#), REST APIs, gRPC, Git, Linux, Maven, [Testcontainers](#), pg_stat_statements

Competencies: Infrastructure Automation, Container Orchestration, Distributed Observability Pipelines, Systems Security

RELEVANT COURSEWORK

Software Design & Patterns:

OOP principles, design patterns (Factory, Observer, Strategy),

Database Systems:

clean architecture.
Relational schema design, query optimization, indexing,
transaction management with PostgreSQL.
Algorithmic complexity, tree/graph traversal, efficient data
manipulation.

Data Structures & Algorithms:

LANGUAGES & SOFT SKILLS

Languages: Azerbaijani (Native), English (Advanced - C1), Russian (Intermediate - B1)
Soft Skills: Problem-solving, Communication, Teamwork & Collaboration, Adaptability, Attention to Detail
